Lab 5: The Chi-Square and the Poisson

Chi-Square goodness of fit test determines how well theoretical distribution (such as normal, binomial, or Poisson) fits the empirical distribution. In Chi-Square.

Stata | FAQ: Stata 5: Goodness-of-fit chi-squared test reported by poisson

This function performs a chi-square goodness of fit test for a Poisson distribution.

The likelihood is defined as the total probability of observing the data given required. This is the method used by the error command, which searches for the parameter value where the statistic differs from that at the best fit by a value specified in the command.
