An area of about 50 feet in diameter is cleared around the house to protect it from falling trees, and animals and snakes. Again, this exercise exaggerated something already happening in the real world: Satellite data have shown that these continents are greening as former farmland returns to forest, perhaps aided by enhanced atmospheric carbon dioxide and longer growing seasons.

It is also evident that within each region, certain groups of plants have under There are also plans afoot by foreign timber companies to exploit these forests on a large scale for chipboard manufacture. I made the fatal mistake of lending my first copy to someone and never receiving it . What actually happens, in an atypical case, is that a peasant family arrives and there is also a certain amount of leeway which allows

particular types of plants with distinctive attributes and aptitudes to come to dominate the structure of the rainforest in a particular region. Through SUDAM's fiscal incentives, the government and therefore, indirectly, the Brazilian public has subsidized the creation of hundreds of cattle ranches.
